# Notes

## Delivered Package

The product is always delivered in its entirety even if only some components have been licensed, the full source code is always available. **Purchased components are always covered by the commercial license.**

## Non-Commercial Packages

Software components which are part of the ChibiOS Open Source project but not offered commercially are included in the delivered package as demonstration software or examples at no cost and not covered by any warranty under a permissive Apache 2.0 license.

## Silicon Vendors-Provided Files

Silicon vendors-provided headers or source code can be present in the package. The software is provided under the original licenses **at no cost and without any warranty.**

## Open Source Parts

All the software delivered under the Apache 2.0 license must be considered **demonstration software or examples provided at no cost and not covered by any warranty.** Apache 2.0 licensed parts are never part of the purchased components. Even though no warranty is provided for Open Source parts, **basic support** is available through the **public** open source project resources: mail, forum, wiki.

## External Packages

The product can include external open source packages required by some demonstration applications. Said packages are not required by the purchased components and only included for demonstration purposes under their original licenses. No warranty nor support is provided for external software.
